with the rapid growth of networking and high computing power the demand for large scale and complex software systems has increased dramatically many of the software systems support or supplant human control of safety critical systems such as flight control systems space shuttle control systems aircraft avionics control systems robotics patient monitoring systems nuclear power plant control systems and so on failure of safety critical systems could result in great disasters and loss of human life therefore software used for safety critical systems should preserve high assurance properties in order to comply with high assurance properties a safety critical system often shares resources between multiple concurrently active computing agents and must meet rigid real time constraints however concurrency and timing constraints make the development of a safety critical system much more error prone and arduous the correctness of software systems nowadays depends mainly on the work of testing and debugging testing and debugging involve the process of detecting locating analyzing isolating and correcting suspected faults using the runtime information of a system however testing and debugging are not sufficient to prove the correctness of a safety critical system in contrast static analysis is supported by formalisms to specify the system precisely formal verification methods are then applied to prove the logical correctness of the system with respect to the specification formal verification gives us greater confidence that safety critical systems meet the desired assurance properties in order to avoid disastrous consequences

this reference work updated since the 1997 edition provides comprehensive information on the major professional leagues in north america baseball basketball football hockey and soccer arranged chronologically the entries for each league in each sport include individual statistical leaders championship results major rules changes winners of major awards and hall of fame inductees

this book is open access under a cc by licence this book constitutes the proceedings of the 22nd international conference on fundamental approaches to software engineering fase 2019 which took place in prague czech republic in april 2019 held as part of the european joint conferences on theory and practice of software etaps 2019 the 24 papers presented in this volume were carefully reviewed and selected from 94 submissions the papers are organized in topical sections named software verification model driven development and model transformation software evolution and requirements engineering specification design and implementation of particular classes of systems and software testing
